### FIRECORE

#### Description

The FIRECORE is a core material with very good fire properties combined with good mechanical properties. It is a light weight glass reinforced stiff panel, suitable for bonding various substrates to the surface. It is based on a pre-preg system that is compression moulded and cured in a large range of thicknesses and densities.

It is water resistant, absorbs about 15% of its own weight when submerged in water. It dries easily out after submersion, it can be used in wet areas.

Density.

From 80 to 400 kg/m<sup>3</sup>

Size: Maximum 2500 x 1240 mm
